

A few simple habits can prevent condensation, mould and damage to your home, and keep you safe too.

WHY DOES CONDENSATION HAPPEN?

Condensation occurs when warm, moist air meets cold surfaces. Moisture comes from everyday activities such as:

If this moisture can't escape, it can lead to condensation and mould.

SHOWERING

COOKING

DRYING CLOTHES
INDOORS

SLEEPING

SPOT MOULD EARLY

- Clean small patches as soon as you see them using a suitable mould cleaner.
- Don't ignore it—mould can spread quickly.
- If mould returns or keeps coming back, contact 55 Rent.

5 EASY WAYS TO PREVENT CONDENSATION

1

VENTILATE

- Open trickle vents where fitted.
- Use extractor fans in kitchens and bathrooms.
- Open a window for around 30 minutes after showering or cooking.
- Keep wall vents clear at all times.

2

KEEP YOUR HOME WARM

- Heat all rooms regularly.
- Try to keep rooms above 15°C.

3

DRY CLOTHES CAREFULLY

- Dry clothes outside where possible.
- If drying indoors, use a well-ventilated room.
- Use a tumble dryer if available.

4

LET AIR CIRCULATE

- Move furniture away from outside walls.
- Open curtains every morning.
- Don't block radiators or vents.
- Avoid overfilling wardrobes and cupboards.

5

REMOVE MOISTURE

- Wipe windows and sills each morning.
- Dry any damp surfaces.
- Clean small areas of mould before they spread.

WE'RE HERE TO HELP

If you're unsure about mould, damp or condensation, get in touch. We're happy to advise.

REMEMBER

A warm, well-ventilated home is the best protection against condensation and mould.
